

ARTEM ZHAVROTSKYI · CV

Delivery Manager / Senior Technical Project Manager

LinkedIn: [artemzhavrotskyi](#)

Profile

Over more than 7+ years as a Delivery / Project Manager, I have covered all phases of the project lifecycle, managed teams of up to 40 people, and successfully overseen multiple projects simultaneously (Fixed-price, Dedicated Team, T&M). My approach follows PMI (PMBOK 6, 7, 8 Standard+) and Agile best practices, with a deep understanding of PMO processes and hands-on use of tools such as Jira, Confluence, Power BI, and AI copilots. Strong communication skills and a structured approach enable me to collaborate effectively with stakeholders and vendors, achieving high-impact results.

Volunteer mentor — Ukrainian Armed Forces (open webinars, development of training programs).
Speaker at IAMPM — developing training courses for PM, Jira, Confluence, SQL.

Education

M.Sc., Radio Engineering — National Technical University of Ukraine "KPI", Radiotechnical Faculty.
2005

M.Sc., Enterprise Management — Kyiv Business Institute ("KPI"). 2005

Work Experience

Brightgrove 2023 – Present

Technical Senior Project Manager → Delivery Manager

Contractual Model: Dedicated Team, T&M, Fixed Price

Managing several projects simultaneously across Data Science, Embedded, Fintech, Logistics, and Real Estate domains.

Current workload:

- 50% Delivery Management (with two subordinate PMs),
- 30% Direct Project Management,

- 20% PMO / Pre-sale.

Project: Aazzur — Embedded Banking / BaaS Integration Platform

Contractual Model: Time & Material

Team: PM / Delivery Manager, Tech Lead, 5× Java Backend Engineers (Spring Boot)

Tech stack: Java, Spring Boot, REST APIs, banking / card scheme integrations (incl. Mastercard)

Aazzur is a Berlin-based embedded finance orchestration platform enabling companies to rapidly integrate financial services — bank accounts, cards, loans, insurance, and investments — into their own products via APIs and modular, white-labeled “Smart Finance Blocks.” Leading the launch and scale-up of a new integration squad as a vendor delivery partner: forming and onboarding a 5-person Java / Spring Boot backend team alongside the client’s Tech Lead, defining the technical stack and delivery process, and driving expansion of platform integrations — including direct Mastercard integration work — from planning through quality oversight of delivered solutions.

Project: Onward — AI-Assisted Data Import Platform

Contractual Model: Time & Material

Team: PM, Ruby Backend, Frontend (Ember.js), Node.js / AI Engineer, DevOps, QA

Tech stack: Ember.js, Ruby, Node.js, OpenAI API (Containers & Responses), AWS (S3, SQS, EC2, CloudWatch, IAM), Heroku

Design and delivery of an AI-assisted data import solution integrated into the existing Onward Portal — automating ingestion of heterogeneous documents (PDF, DOC, DOCX, JSON, CSV, XLSX) via OpenAI for parsing, structural and data-level validation, preview / review, and asynchronous loading of Riders and Rides into the Ruby backend. Scope includes a Node.js importer microservice with agentic workflow, AWS-based infrastructure (S3 + SQS/DLQ, EC2, CloudWatch), rollback support, and Heroku-compatible deployment.

Project: AI Assistant for Pathologist — Private On-Premise LLM for Diagnostic Reporting

Contractual Model: Time & Material

Team: PM, Tech Lead / Solution Architect, Backend & AI Engineer, Android Developer, Delivery Coordinator

Tech stack: Python, Local LLM (Gemma family), RAG, Voice-to-Text (Polish), Android

Discovery and development of a private AI assistant for a pathologist that runs entirely on the customer’s own hardware (no software installed on hospital workstations) to

generate, edit, and accumulate Polish-language diagnostic descriptions. Voice / text queries captured on an Android device are processed by a local LLM with RAG over the doctor's prior diagnoses on an RTX 3090 server; generated text is then "typed" into any hospital system via Bluetooth / USB keyboard emulation — preserving one-way data transfer, full data privacy, and universality across multiple workstations. Scope includes a de-risking spike, local LLM setup, Polish Voice-to-Text, RAG over the knowledge base, Android app, training / ingestion web UI, and the workstation integration bridge.

Project: GEO Visibility Platform — AI-driven SEO Analytics Tool

Contractual Model: Time & Material

Team: PM, Data / ML Lead, Data / ML Engineer

Tech stack: Python, OpenAI API, CLI, JSON / CSV

Development of an MVP tool designed to measure website visibility in generative AI search responses (e.g., ChatGPT). Automates persona generation, query execution, response parsing, and WCI metrics calculation with historical versioning based on provided RFP and prompt templates.

Project: IT System for River Mall

Industry: Retail **Duration:** 2019–2022, 2025–2026

Role: Solution Architect & Project Manager **Team:** 3–25 (up to 5 teams)

Project Type: Time & Materials, Fixed Price

Led a 3-year program to design and deliver River Mall's IT ecosystem from scratch — network / server infrastructure, mobile app, Wi-Fi analytics, captive portal, financial system, and analytics platform — using hybrid Agile / Waterfall. Owned the 5-year roadmap, vendor analysis, tender documentation, and regular updates to ownership; integrated on-premises and cloud solutions for customer engagement, operations, and analytics.

- **Infrastructure:** Designed and deployed LAN / server infrastructure from scratch on HPE Aruba (selected via tender); managed integrator work, documentation, and hiring of the in-house IT team incl. IT Director.
- **Solutions:** Mobile app with BLE navigation and location-triggered push; Wi-Fi analytics with heatmaps and movement tracking; custom captive portal; Zendesk-based tenant help desk; financial system and website; centralized DWH with 8 Power BI dashboards.

- **Security & Results:** FortiGate with UTP; Aruba AirWave for network monitoring. Reduced equipment costs by 40% and integrated on-premises + cloud analytics via DWH and Power BI.

Subproject: DWH Migration & Modernization (DMS Stack, River Mall)

Contractual Model: Fixed Price

Team: PM, Power BI Engineer, Data Engineer, DevOps

Tech stack: Python, Dagster, PostgreSQL, MS SQL (legacy), MySQL, Power BI, Docker Compose, GitLab CI/CD

Modernization of River Mall's visitor analytics and financial reporting — migrating from a legacy MS SQL architecture to a centralized PostgreSQL DWH orchestrated with Dagster. Consolidates data from 1C (via a MySQL buffer), R-Stat counters (MSSQL), Hikvision counters (PostgreSQL), rental email exports, and legacy history (backfill). All business logic is computed inside the DWH; Power BI and a Telegram bot are read-only consumers of pre-aggregated data. Deployed via Docker Compose and GitLab CI/CD, with schema migrations managed through Alembic.

Honsel RivSmart eBZ Zero S

Domain: Embedded Development **Model:** T&M, 6 FTE

- Led development of a compact tool for setting blind rivets, compliant with Industry 4.0 standards.
- Drove migration from STM32F103 to STM32L496 to overcome memory limitations; personally conducted UAT to validate firmware performance and contributed to debugging.
- Collaborated with Bosch engineers to align firmware with Industry 4.0 requirements, ensuring seamless battery integration and compliance with stringent quality standards.

Nextrail

Domain: Data Science **Model:** Fixed Price, 5 FTE

- Managed simulation and validation of braking parameters for ETCS Gamma model trains, ensuring compliance with European railway standards (prEN 17997-1, DIN EN 16834).
- Independently led the pre-sale process — crafting technical proposals and conducting technical interviews to build a high-performing team — while supervising dynamic brake testing.

- Oversaw a mathematical braking model using Monte Carlo simulations to calculate correction factors (Kdry, Kwet), securing certification readiness under ETCS Baseline 3.

PMO & Pre-sale Contributions

- Established a PMO — introducing standardized processes, KPIs, and templates to enhance oversight and drive continuous improvement aligned with company strategy.
- Led a \$3M+ annual delivery portfolio across Embedded, Data Science, Logistics, and Real Estate, managing 2 Junior PMs and 40+ developers globally.
- Spearheaded pre-sales for US and German clients, improving proposal win rate by 20% through tailored value propositions, market research, and roadmap visualizations.
- Built trusted client partnerships, identifying cross-sell opportunities and preparing complex documents (PoC, MVP, SOW).
- Mentored team members with personalized career plans; launched a 2023–2024 PM mentoring program that reduced external hiring costs by 15%.

Key Achievements

- **AI Domain Leadership:** Founded the ML / AI / Data Science vertical, securing a \$50K project (5 FTE, 2 months) for a German manufacturer through strategic partnerships.
- **Agile Delivery Innovation:** Implemented an Agile Delivery Framework for 3 clients (3–22 FTE), increasing delivery-expertise demand in negotiations.
- **Process Optimization:** Conducted PMBOK-based audits across 12 projects, introducing project health reports and tech audit services.
- **Employee Risk Reduction:** Launched the ERR process, improving team retention and operational stability.

SoftServe 2022 – 2023

Middle Project Manager → Technical Middle Project Manager

Contractual Model: Dedicated Team, T&M **Team Size:** 17

Client — NDA: ETL Library & Data Analytics

Domain: Data Science **Model:** T&M, 21 FTE

Managed multiple workstreams, delivering scalable data solutions and analytics tools to support decision-making.

- **ETL Library:** Led creation of a Databricks-based ETL library to process large datasets, configuring clusters for scalability and validating data quality during UAT.
- **Dashboards:** Designed interactive Power BI dashboards with optimized KPI visualizations, enhancing stakeholder insight.
- **Release Management:** Coordinated release schedules and quality control across teams, ensuring stable deployments and timely updates.

Smelting Furnace Optimization

Domain: Embedded / Data Science **Model:** T&M, 4 FTE

Managed a solution to optimize smelting furnace operations by analyzing historical performance data and updating firmware configurations.

- Oversaw collection and analysis of historical sensor data per furnace to identify inefficiencies, enabling targeted firmware updates.

IWIS 2019 – 2021

Junior Project Manager → Middle Project Manager / Business Analyst

Contractual Model: Time & Material, Fixed Price **Team Size:** 3–25

- **IoT Sensor Monitoring (IoT, T&M, 5 FTE):** Integrated ESP8266 with ATmega using nRF24 modules for wireless communication over SPI / UART, with exhaust-fan control and industrial temperature / humidity sensors via Modbus.
- **SoilSense IoT Monitoring (Agriculture, T&M, 3 FTE):** PoC for an IoT solution optimizing agricultural processes — soil temperature and acidity at three depths, transmitted via LoRa, with a visualization platform recommending irrigation and fertilizer use.
- **Paypolitan Mobile App (Fintech, T&M, 15 FTE):** Mobile application for working with cryptocurrencies, fintech, and blockchain.
- **Planet Kino IT Solutions (Retail IT, T&M, 4 FTE):** Solution for showing session times and available seats on plasma TVs; developed WebOS-compatible animations and webhooks for remote updates, management, and reboots.

Terrasoft 2018

Project Coordinator / System Analyst

Contractual Model: Product Team **Team Size:** 7

- Organized and controlled the work of the BPM'online development Scrum team (full PLC).
- Delivered 3 minor releases; developed prototype UX interfaces and product-line concepts; ran regular competitor research and usability testing.

UCRF — Ukrainian State Center of Radio Frequencies 2006 – 2018

Radio Spectrum Management System (RSMS) — Product Owner / Support Team Lead

Dates: 2013–2018 **Model:** Product Team + Vendor **Team:** 3–14

Owned implementation, customization, and ongoing development of the RSMS (ICS Manager / ICS Telecom) as Product Owner — driving migration and verification of data into the ICS Manager database and building custom screen forms and templates to align the system with departmental business processes. Hired and organized L1 / L2 / L3 support teams, ensuring reliable operational support of the platform.

DVB-T2 Radio Planning & RSMS Migration — Engineer, Television & Broadcasting Dept.

Dates: 2006–2013

Radio Planning Expert responsible for coverage calculation and radio planning for Ukraine's DVB-T2 network, and EMC expert. Led migration from the legacy "Broadcasting" software to the RSMS as Product Owner — preparing specifications, managing export / import and data verification, and developing screen forms and templates — while ensuring departmental business processes were fully implemented. Also acted as Business Analyst and Firebird database administrator.

Techniques & Tools — PMBOK 7/8 Performance Domains

Stakeholders

Stakeholder analysis & register, engagement planning, information distribution, meetings

Team

Team charter & structure, servant leadership, conflict resolution, performance evaluation & mentoring

Development Approach & Life Cycle

Planning

Agile / Waterfall / Hybrid tailoring, approach selection by project context

Brainstorming, surveys, inspection & observation, WBS, estimating, Critical Path, schedule compression, reserve analysis

Project Work

Change management, documentation / proposals / SRS, process analysis & continuous improvement, knowledge management

Delivery

Plan creation, execution & revision, day-to-day operations, quality audit, cause-and-effect diagram, incremental delivery

Measurement

KPI & OKR tracking, reporting & forecasting, gap analysis, NPS, P&L / billing

Uncertainty

Probability & impact matrix, risk audits, scenario & contingency planning

Business Acumen & AI-Augmented PM

Data-driven decision making; AI-assisted reporting, forecasting, and code-review workflows

Methodologies

Agile, Scrum, Kanban, Waterfall, Hybrid, SAFe

Tools & Tech Stack

Delivery & PM: Jira, Confluence, Azure DevOps, MS Project, Miro, ServiceNow, MS Office, Zendesk

Data, BI & Databases: Power BI, SQL, Databricks, Dagster, PostgreSQL, MS SQL, MySQL, Firebird

Cloud & DevOps: AWS (S3, SQS, EC2, CloudWatch, IAM), Heroku, Docker Compose, Kubernetes, GitLab CI/CD, Git

AI & ML: OpenAI API, local LLMs (Gemma family), RAG, Voice-to-Text, AI copilots (Claude, ChatGPT), AI-assisted reporting & code review

Engineering & Infrastructure (domain exposure): STM32, ESP8266 / ATmega, nRF24, Modbus, LoRa, HPE Aruba, FortiGate, Aruba AirWave

Standards, Domains & Professional Development

Domain Standards: Payments — PCI DSS / 3DS (familiarity); Industry 4.0; European railway ETCS (prEN 17997-1, DIN EN 16834); EMC

Professional Development: PMI / PMBOK 6–7–8 Standard+ practitioner; Lean & Agile-at-scale (SAFe); IAMPM speaker & trainer (PM, Jira, Confluence, SQL); volunteer mentor
